

# Buy Pastured Poultry

What's the difference between Pastured Poultry and conventionally raised chicken?

## Pastured Poultry

Unvaccinated  
Full Beak (no cannibalism)  
Probiotics (immuno-stimulant)  
Composting litter in brooder (sanitized through decomposition)  
Carbon/Nitrogen ratio 30:1  
Practically no ammonia vapor (smell)  
Brooder skylights  
Rest at night -- lights off  
No medications  
No synthetic vitamins  
No hormones  
No appetite stimulants  
Natural trace minerals

## Conventional Chicken

Vaccinated (immuno-suppressant)  
Debeaked (cannibalism a problem)  
Antibiotics (immuno-depressant)  
Sterilized litter (sanitized through toxic fumigants and sprays)  
C/N ratio 12:1  
Hyper-ammonia toxicity  
No skylights  
Artificial lighting 24 hours/day  
Routine medications  
Routine synthetic vitamins  
Routine hormones  
Routine appetite stimulants (arsenic)  
Manufactured and acidulated trace minerals
